

Press Release for New 300' Communications Tower:

# “Can you hear me now?”

## NEW Hardeeville 300' Communications Tower

The City of Hardeeville in partnership with Jasper County and Motorola is breaking ground on a new communications tower off US 17, Speedway Blvd. The new tower will provide much needed coverage for emergency communications in the southern part of the community. Primarily focused on increasing Emergency Services coverage, but also designed to hold up to four (4) cellular carriers. The project will provide an additional radius of 10 +/- miles of new coverage. This will close key gaps that exist in the area.

Construction on the new tower will begin December of 2022 and scheduled for completion by March 2023. The City of Hardeeville continues to focus on investing in technology and innovation that will provide the best possible experience for our residents and visitors. Quality of life includes solid communication while traveling along our highways and roads. This tower is essential to provide safety and emergency responses when people need assistance. Whether its personal or business, less dropped calls within our boundaries is an important upgrade.

To sum it up, this project is important to everyone living, working and travelling through our community and we are excited to provide these enhanced services!
